Only the above manufacturing source(s) will be solicited because the article to be acquired is a highly specialized part. This NRP Calibrator, Port is coded sole source to King Nutronics Corp. Cage 13859 who owns the drawings and were identified as the approved source of supply by the ISEA during initial provisioning. The Government does not have the rights to the drawings to be able to solicit competitively or to guarantee the same form, fit and function as the item currently being procured. Based on this market research the contracting officer has determined that the only known manufacturing source is King Nutronics Corp.

9. ANY OTHER SUPPORTING FACTS: The main decision logic of the NAVSEA program office in selecting the KNC PPC next generation (3750 series) was they had invested a significant amount of resources into configuration control and management with the PPC 3731 series, which was initially competitively selected for this testing requirement. The afforded benefit of a seamless modernization with the 3750 series PPC meant there was very little additional ILS cost. Infrastructure within the maintenance community was already in place. The cost to incorporate a new model/OEM would have been unachievable and insurmountable within the current budget climate. The current maintenance methodology within the Fleet PMS and schoolhouse/NEC training is establish for the unique application and functionality of this type of equipment vice other portable high pressure calibration standards.
