Item description required for all items:

The Blade, Compressor, Air are the 1st and 2nd stage blades and are attached to the compressor rotor of the LM 2500. The blades are part of the high pressure portion of the turbine. The compression caused by fuel combustion causes the blades to rotate . This rotation creates rotary motion for ships propulsion. The blades also provide cooling air flow paths, high dampening action for low vibration, and low disk rim temperature. There are no compatible substitutes because the blades are designed for specific rotor placement for the LM2500 base assembly.
