

Questions submitted in response to the RFI for SPACES Gen II:

Q1. Please clarify the apparent conflict in the following 2 statements from your posting:

- "provide information on their solution, whether it is data on existing systems, or development approach for new systems"
- "MCSC does not intend to enter into development for new capability, but leverage the current high state of industrial readiness"

A1. The aspect of "development approach for new systems" refers to any R&D being conducted by potential offerors that would be ready in time for the USMC non-developmental solicitation.

Q2. Please define "single person portable", especially in regard to weight limit.

A2. Less than 10 pounds (notional), without the BB-2590 battery or attached radios.

Q3. How many batteries must be charged or radios powered simultaneously?

A3. Charging of one BB-2590 battery and powering of one radio simultaneously is desired.

Q4. What is the estimated initial procurement quantity?

A4. 2000-3000 systems
