

Abbreviated Sole Source Justification for TeraScan DMSP-A System Upgrade

FLENUMMETOCCEN ingests DMSP information for input into the global weather models. DMSP is a jointly funded DoD program now administered by NOAA. DMSP has proven itself to be a valuable tool in scheduling and protecting military operations on land, at sea, and in the air. FLENUMMETOCCEN has used DMSP information for years and has used the proprietary SeaSpace TeraScan system since it is the only one approved for such use. This effort is a system upgrade and it is essential that compatible hardware and software be used in the process.
