

MEMORANDUM FOR FILE

VMWARE BRAND NAME STATEMENT
VEEAM BACKUP AND REPLICATION SOFTWARE

The Nuclear Reactor Supply Chain Management Directorate (NRSCMD), Code 87 of the NAVSUP Weapon Systems Support (NAVSUP WSS) maintains a Secure Network (SECLAN) which currently consists of VMware Software, as the standard for Network and Workstation Virtualization. This purchase represents the Virtualization Software approved to be utilized on the SECLAN. This will minimize the learning curve associated with any new software.

Ease of administration: Our technical personnel are very familiar with VMware Software. This experience cuts down administration time, problem resolution, setup time, and also eliminating the need for various configurations. Changing to another manufacturer is not an option, because VMware is the standard for the SECLAN and the Naval Nuclear Propulsion Program (NNPP).
