The Phalanx CIWS is a shipboard defense weapon system currently deployed on every class of U.S. Navy combat ship, as well as on various international vessels. It is a fast-reaction, rapid-fire, 20-millimeter gun system that automatically detects, tracks, and engages incoming anti-ship missiles, aircraft and littoral warfare threats and is designed to be used at short ranges. It provides ships with a "last-chance" self-defense capability against these threats that have penetrated other fleet defense systems.

When certified cost and pricing data is obtained it will be used to ensure reasonableness, completeness and realism of proposed costs as required.

11. ACTIONS TO REMOVE BARRIERS TO COMPETITION: The government will include a clause in this solicitation that provides that the government will consider alternate offers, and that alternate offerors should submit a source approval request (SAR) package that will be referred to the cognizant engineering activity. If, due to mission requirements, the current procurement cannot be delayed in order to allow sufficient time for the engineering activity to determine whether to approve the alternate offer, the SAR package will be considered for future awards. This item has been reviewed under the NAVICP limited screen process and determined that the item cannot be broken out. No additional actions to remove barriers to competition are required under this process.

This/these item(s) will be reviewed under the NAVICP replenishment parts program.
Should it be determined the item(s) can be broken out, future acquisitions will be competitive.
