Item description: The sediment strainer is a component of the Main Feed Pump within the Steam and Electric/Propulsion Plant onboard CVN 68 Class Aircraft Carriers and is utilized for the removal of foreign material from fuel and oil service lines. An air cylinder positions the diverter valve, blocking the flow to the basket to be cleaned while simultaneously putting a clean basket back into service. Clean back flushing fluid is obtained from the discharge side of the basket. Diverter and drain valves are controlled sequentially to initiate back flushing. This specific sediment strainer is designed specifically to fit within the configuration of the main Feed Pump.
